

Against theistic evolution.

1. Facts of biology against. Even tho credit God with starting things or even stepping in, naturalistic phenomena won't account for changes nec. Nat'l process breed promiscuity not thoroughbreds. Fittest haven't survived, e.g. dinosaurs.
2. Facts of Scripture against. 1 Cor 15:45; Mk 10:6. You can't ride 2 horses in opposite directions.

Evidences for evolution. Decomposition of uranium

1. Carbon 14 test. Based on uniformitarianism.

In 176 yrs the lower Miss has shortened itself 242 miles. 1 1/3 miles per year. Thus in 742 yrs from now the lower Miss will be only 1 3/4 miles long and Cairo and New Orleans will have joined their st. tog.

Pop of US doubled every 20 yrs from 1800-1860. Thus by 1940 pop was 503 mill. Actually it was 131 mill.

2. Embrology. Embryo goes thru stages. From ameba to worm, fish, amphibian, reptile, fowl, mammal, man. No scientist would fail to distinguish an ameba and the original egg which develops into a baby.

Fish--embryo inside amniotic sack but doesn't breathe like fish. Gets oxygen from mother. Gill-like things appear but don't have anything to do with breathing as in fish. Then disappear. *Resides into normal thing e.g. pituitary gland & ear.*

Tail. When embryo about size of lima bean there is activity in posterior region. But what is tail develops into legs, and no one fails to distinguish legs. *Just the legs folded up & tail thing goes out*

Due to disproportionate development which is normal.

3. Fossils. In diff strata doesn't prove evol. Upset in some places of the earth. Evol of horse favorite exhibit. But from 1st fossil to 2nd is gap of 48 mill years. Arrangement is arbitrary. Species are separate and just bec you exhibit them side by side doesn't prove evol. In same stratum you find ancestor of modern horse you find modern. Suppose shetland pony and Budweiser horse died and buried side by side. If dug up later does that prove evol. Ameba is contemporary of man, so is worm, so is fish. No evol.

Supposedly Oldest known fossil of insect is same kind of insect we have today.

- a. in fossils you have all forms of life at same time as Bible says.
- b. In fossils no change from species to species. Don't see it happening today either.
- c. Actually devolution. No monstrous creatures today.

4. Anthropology.

- a. Nebraska man. Actually 1 tooth only.
- b. Java ape man. Piece of top of skull, piece of thigh bone, 3 teeth about 50-70 feet apart when discovered. Never agreed on that these are human fragments. Same as Pithecanthropus Erectus. Erect ape man. Were found in river bed and means had to be preserved for 750,000 yrs in sand.
- c. Piltdown man. Exposed. $\frac{1}{2}$ mill years old but actually 50.

Observe: Not case of a missing link but of no 1st link no chain, just a few teeth.

Observe: Arrangement is misleading. Note Life articles. People in various stages of civilization all living together today but doesn't prove evol.

Observe: race devolving today. Don't live as long as Biblical people. Still look up to Plato, Socrates. Need redemption more than ever.
